

Guide to install NoTopleft hot corner in CentOS7

This extension helps to disable the top left hot corner which is activated when the mouse pointer hover over the area at the top left corner of the screen.

1. Open <https://extensions.gnome.org> on your browser.
2. Search for the extension **"No topleft hot"** corner in the search bar

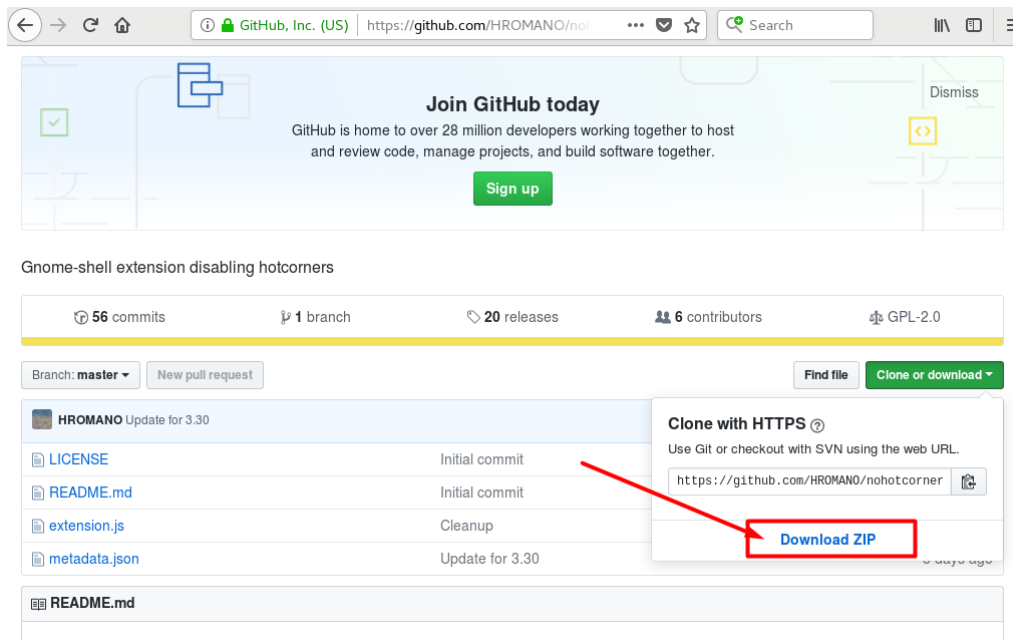

3. Click on the **Extension Homepage** link

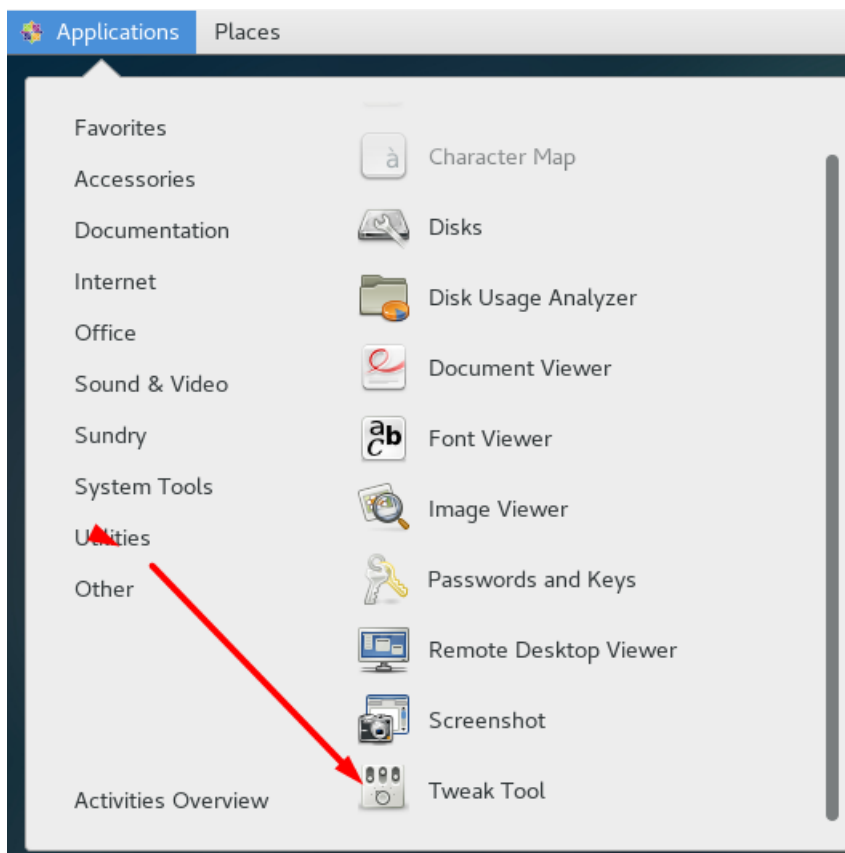

This extension disables the top left hot corners. You can still click on Activities or press the dedicated key to reach the overview. Since 3.8, should work with other extensions modifying the Activities button. On versions prior to 3.8, may not disable other hotcorners in multiscreen configurations and won't work on fallback/flashback mode.

Extension Homepage <https://github.com/HROMANO/nohotcorner/>

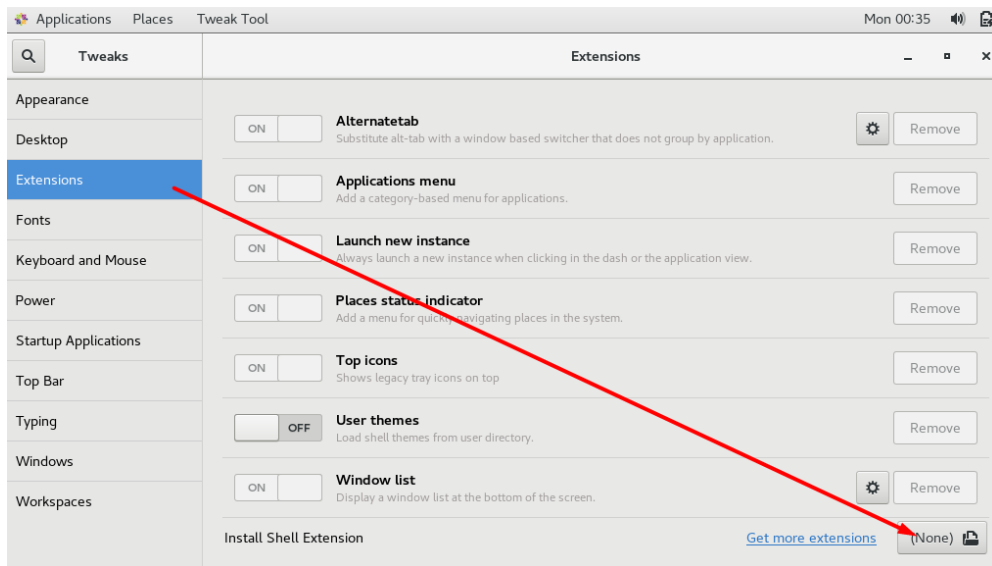

4. Click the **Download zip** file to download to your computer

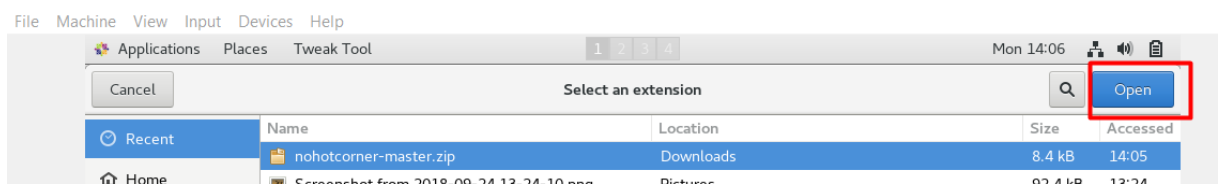

5. After downloading the extension then Go to **Applications > Utilities > Tweak Tools**

6. From **Tweak Tool** go to **Extensions** and click on the folder **“(None)”** button

7. Choose the extension and Click on the **open** button at the right corner to upload the zip file

8. Finally, Click on **ON/OFF** button to activate.
